

Nearshore Software Development for One of the Big Four Accounting Firms

Client: **A Leading Accounting Organization**

Industry: **Accounting**

Location: **UK**

About Our Client

Our client is a globally recognized business brand and one of the four largest multinational professional services networks. The company is a leading provider of accounting, auditing, tax, and advisory services.

Business Challenge

The company referred to TSD at the beginning of 2017 since they had a requirement from a client of theirs - one of the world's largest banks, to develop an extranet platform. The corporation faced the need for experienced and

well-qualified full-stack software developers and quality assurance analysts to join their existing IT department and support the development process of the extranet platform. The platform's primary purpose was to provide the bank with the ability to store, monitor, and analyze custodian information.

The successfully started IT staff augmentation collaboration continued with a second project for the leading auditing and advisory services provider as the firm met the need for developing a file processing platform. Having already established a trustworthy business partnership with our team, the client kept benefitting from TSD's IT services for accounting firms in order to complete their project with the help of expert IT resources.

Solution

AN EXTRANET PLATFORM

TSD's expertise in delivering IT services for accounting firms efficiently responded to our customer's needs by creating a solution based on the requirements of their client from the banking industry. Not only did we manage to build the requested product, but the final solution also exceeded the organization's initial expectations. TSD's nearshore IT services successfully contributed to the professional development of an extranet site where different users with specific permissions can log in and enter information that is recorded. Furthermore, the entered custodian information can be monitored within the platform.

The developed solution has been of great benefit to the purposes of the end client, and it is currently used by two of the world's largest banks. As a reliable IT staff augmentation partner, TSD continues to take care of the customer's convenience by completing ad-hoc requests for adding new functionalities and enhancing existing ones.

A FILE PROCESSING PLATFORM WITH TRANSLATION AND TRANSCRIPTION

Our trusted IT staff augmentation collaboration was expanded with the client's need for highly skilled specialists to develop a file processing platform with translation and transcription functionality. Our competent software developers and quality assurance analysts have been actively working on developing the needed product. Our IT resources have met the organization's needs by successfully creating a platform that can record conversations and provides real-time translation and transcription capability in various languages selected by the user. The program also allows transcriptions to be extracted and sent to specific users.

THROUGH AN EFFICIENT NEARSHORE PARTNERSHIP,
OUR CLIENT, ONE OF THE WORLD'S BIG FOUR
ACCOUNTING ORGANIZATIONS, NOT ONLY
OBTAINED WELL-DEVELOPED SOFTWARE
SOLUTIONS THAT PERFECTLY MEET THE COMPANY'S
AND ITS CLIENTS' NEEDS BUT ALSO INCREASED THE
CAPACITY AND PRODUCTIVITY OF ITS IT
DEPARTMENT.

Results

The key benefits acquired by the client through this reliable **IT staff augmentation model** are the well-developed and useful software solutions, the optimal satisfaction of the end clients, and the added value to the organization's business due to the rich expertise of our resources.

Our IT specialists are highly engaged with their day-to-day responsibilities by providing valuable business logic know-how and problem solutions, which in turn further contributes to the smooth operations and positive overall business outcome for the leading accounting and auditing corporation.
